ROBINIA DECKING 22X120MM - P417

- Excellent stability
- To fix with Stainless steel screws

Naturally, the most sustainable local wood

Robinia or "false acacia" is the most sustainable European wood without any preservatives. Our Robinia comes from the forests of Hungary, where it has been widely planted and currently accounts for 20% of the forest. It has a straight grain and a warm yellow to greenish-yellow colour. The wood develops a patina with silver-grey reflections as it ages. All our boards are finger-jointed (on edge) for greater stability and good looking.

Environment

Characteristics

Specie	Robinia	Durability for fungus	Very durable
Origin (country)	Hungary	Durability to termites	Very durable
Treatment	No treatment	Class of use	Classe 4
Main material	Wood	Density (kg/m3)	740
Installation type	To screw	Linear mass (kg/m)	1.95
	Decking	Hardness (Brinell) N/mm2	48
Scientific name	Robinia pseudoacacia	Modulus of elasticity (Mpa)	16900
Botanical family	FABACEES	Reversible profile	oui
Drying	KD 18 +/-2%	Joist spacing (mm)	450
Stability	Medium stability
